## 5. Glossary

This table describes common terms used in these release notes.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AIML</td>
<td>Artificial Intelligence Markup Language (AIML) is an XML dialect used by natural language software agents. Elements marked up with AIML tell agents what to say in different situations and, in some cases, how to say their response.</td>
</tr>
<tr>
<td>API</td>
<td>Application Programming Interface is a set of subroutines, data structures, communication protocols, and other tools used to build software. An API provides the building blocks used by programmers to build software applications.</td>
</tr>
<tr>
<td>Business Process Network (BPN)</td>
<td>Defines process-based interactions between Amelia and a user, for example, unlocking an account or resetting a password.</td>
</tr>
<tr>
<td>Classifier Model</td>
<td>A data set Amelia creates with intents, entities, utterances, and other data to understand conversation used to describe a topic. Algorithms process the input data to evaluate the importance and weight of words and phrases in the data set.</td>
</tr>
<tr>
<td>CMS</td>
<td>Content Management System is one or more software programs used to create, manage, and publish digital content.</td>
</tr>
<tr>
<td>CQA</td>
<td>Clarifying Question Answer (CQA) is the ability for Amelia to determine potential confusion within utterances and ask questions to clarify the user intent in the utterance.</td>
</tr>
<tr>
<td>CSV</td>
<td>Comma Separated Values is a text file where row data is separated (delimited) with commas.</td>
</tr>
<tr>
<td>DEB</td>
<td>The Digital Employee Builder (DEB) tool designs Amelia’s conversation process flow by organizing and then configuring a series of blocks. It is the drag and drop alternative to the Business Process Network (BPN) schematic diagram approach used in earlier Amelia versions.</td>
</tr>
<tr>
<td>DNN</td>
<td>A Deep Neural Network (DNN) is an artificial neural network that mimics the complex neural networks in animal and human brains. DNNs have multiple layers between input and output with each layer evaluating utterances for words and the relationships between words.</td>
</tr>
<tr>
<td>ELMo</td>
<td>Embeddings from Language Model (ELMo) is a Natural Language Processing (NLP) model used to evaluate utterances to determine the meaning of a single word based on words around it. For example, the word bank has different meanings in the utterances, “The bank down the street was robbed” and “We had a picnic on the bank of the river.” The words robbed and river indicate the word bank has a different meaning in each sentence.</td>
</tr>
<tr>
<td>Entity</td>
<td>Data collected to complete an intent goal, for example, a date of birth for a loan application.</td>
</tr>
<tr>
<td>EQA</td>
<td>Elaborate Question Answering (EQA) involves asking dynamic follow-up questions for more information when an utterance doesn’t converge on an intent.</td>
</tr>
<tr>
<td>FAQ</td>
<td>A list of frequently asked questions related to a specific topic.</td>
</tr>
<tr>
<td>FQT</td>
<td>Fully Qualified Task, a task that has been evaluated as acceptable to be processed to resolution.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>HMR</td>
<td>Hot Module Replacement is a feature of webpack software module bundler to allow modules to be exchanged, added, or removed while a software application runs.</td>
</tr>
<tr>
<td>IdP</td>
<td>An identity provider (IdP) is a system entity that issues authentication assertions with one or more single sign-on (SSO) profiles using SAML (Security Assertion Markup Language).</td>
</tr>
<tr>
<td>Intent</td>
<td>The user’s goal, for example, to qualify for an auto loan. The goal requires a process to complete.</td>
</tr>
<tr>
<td>JEXL</td>
<td>Java Expression Language is library to provide dynamic scripting features in applications and frameworks written in the Java programming language.</td>
</tr>
<tr>
<td>JSON</td>
<td>JavaScript Object Notation is a text data storage standard that uses name:value pairs to organize data in an ordered list easily processed by many programming languages.</td>
</tr>
<tr>
<td>LDAP</td>
<td>The Lightweight Directory Access Protocol (LDAP) is an open cross platform protocol used for directory services authentication. LDAP is a language applications use to communicate with directory services to authenticate users.</td>
</tr>
<tr>
<td>LP</td>
<td>Language Pack, software that when installed provide Amelia with the ability to speak a specific language.</td>
</tr>
<tr>
<td>MIME</td>
<td>MIME (Multi-Purpose Internet Mail Extensions) is an extension of the original Internet e-mail protocol to let people exchange different kinds of data files on the Internet, for example, audio, video, images, application programs, and other kinds, as well as the ASCII text handled in the original protocol.</td>
</tr>
<tr>
<td>Negative Utterances</td>
<td>An unlabeled training utterance, negatives help Amelia learn the difference between tasks and knowledge she is trained on and things she is not. They help Amelia understand words that are similar but have different unrelated meanings than utterances used to trigger the intent goal and Amelia’s processes.</td>
</tr>
<tr>
<td>NER</td>
<td>Named Entity Recognition is part of extracting information to locate named entity mentions in unstructured text then classify the entities into categories, for example, person names, organizations, and date/time expressions.</td>
</tr>
<tr>
<td>NLP</td>
<td>Natural Language Processing (NLP) mixes computer science, information engineering, and artificial intelligence to program computers to analyze and understand natural human language, the unconstructed casual way people talk.</td>
</tr>
<tr>
<td>NPE</td>
<td>NullPointerException is a Java RuntimeException. In Java, a special null value can be assigned to an object reference. A NullPointerException is thrown when an application attempts to use an object reference that has the null value.</td>
</tr>
<tr>
<td>PSA</td>
<td>The Personal Speech Act (PSA) is a classifier used to identify insults and compliments.</td>
</tr>
<tr>
<td>SaaS</td>
<td>Software as a Service (SaaS) is a software licensing and delivery model in which software is licensed on a subscription basis and is centrally hosted.</td>
</tr>
<tr>
<td>SAML</td>
<td>Security Assertion Markup Language (SAML) is an open standard used to exchange authentication and authorization data between an identity provider and a service provider. SAML is an XML-based markup language.</td>
</tr>
<tr>

<td>Definition</td>
</tr>
<tr>
<td>------</td>
<td>------------</td>
</tr>
<tr>
<td>SSO</td>
<td>Single sign-on (SSO) is an authentication scheme to allow users to log in with a single ID and password to any of several related yet independent software applications. SSO passes an authentication token seamlessly to applications configured to receive and process tokens.</td>
</tr>
<tr>
<td>TLS</td>
<td>Transport Layer Security (TLS), and its now-deprecated predecessor, Secure Sockets Layer (SSL), are cryptographic protocols designed to provide communications security over a computer network. Websites use TLS to secure all communications between their servers and web browsers.</td>
